Tools

The example notebooks use these tools:

- folium: folium adds Leaflet.js support to python projects for visualizing data in a map.
- pystac: PySTAC is a library for working with SpatioTemporal Asset Catalogs (STAC) in Python 3.
- rioxarray: rasterio xarray extension
- sat-search: Sat-search is a Python 3 library and a command line tool for discovering and downloading publicly available satellite imagery using STAC compliant API.
- stackstac: stackstac.stack turns a STAC collection into a lazy xarray.DataArray, backed by dask.
